- Eduardo Chocho, CPA. Phone: +589 94 407 880.
- Alicia Terilli, CPA. Phone: +589 99 520 822.

To Whom It May Concern,

I am writing to supplement the information provided in my CV, which is attached to this letter, as my university education differs from my current professional interests.

My tertiary education was in civil engineering at the Faculty of Engineering of UDELAR, and although it is a bachelor's degree (5-year duration), it has little connection with computer sciences. With the title of Civil Engineer, I developed professional tasks in various areas related to that career, but my interest in computer science was always present. Therefore, at the beginning of 2022, after several conversations with colleagues working in the field, I decided to finally start specific training in web development, initially opting to study HTML and CSS in-depth, then JavaScript, and finally React.

In the second half of 2024 I joined the School of Testing program offered by Endava Uruguay, where I trained in various areas of testing, including manual and automated testing, with a focus on both front-end and APIs.

My goal from the beginning was to obtain solid training, not skipping intermediate steps merely to get a job, but understanding problems and solutions in an orderly and effective manner to become the best developer possible.

At this point, having completed various courses on the topics mentioned above, I wish to start developing myself in the field. My experience so far is through different types of exercises (some of which are showcased on my personal website, detailed in the CV), which over the months have led me to currently feel prepared to enter the job market.

As for myself, I am an organized person, who works very well in groups, and learns very quickly (which is why I initially decided to study all the subjects self-taught).

Although I have extensive work experience in positions that require a great capacity for analysis and problem-solving, I understand that hiring someone newly trained in a new discipline is an uncertainty for any employer. Therefore, I appreciate any opportunity you can provide, having no problem working on a trial basis for the time you consider appropriate to evaluate my work capacity.

Sincerely,

Federico Ruttkay
